

## **Production Incentive Control** **PIC**

# **Incentive Payroll for Knitting Industry Incentive Payroll for Dyeing Industry Incentive Payroll for Weaving Industry Machine Monitoring for All three.**

Byte Software Services, LLC has expanded its portfolio of software to include both individual and group payroll for knitting, dyeing and weaving plants that pay an incentive based on production.

The basic module provided for easy entry of basic production data such as revolutions for each knitting machine. The machines are attached to a cluster and assigned to an individual or group. Off Standard time and machine efficiencies are then considered in calculating earnings.

Net Pay is an optional module or the earnings may be exported to a third party payroll software or service.

With the addition of our machine interface software and sensor hardware, multiple machines can be monitored in real-time and the production information (revolutions) collected, thus eliminating the need for manual collection and data entry. Supervisors with wireless PDAs can assign, transfer, or change the status of machines without having to go to a desktop computer.

All of this machine data is displayed in real-time dashboard format to give instant status of factory or machine conditions. Trigger points can be set for email notification of selected events.

- Machine utilization, downtime reporting help identify poor machine performance before it becomes a problem.
- Simple to install, low maintenance, built for the shop floor environment. Expandable to track an unlimited number of machines!
- Balance loads for each Cluster
- Supports Wireless and Ethernet I/O
- Automatic and manual data collection
- Integrates with Time & Attendance System
